Isaac Neibaur Roswell, GA

hello@isaacneibaur.com

I serve as an analytical bridge between technical data systems and business decision-makers. By leveraging Power BI, Python automation, and SQL optimization, I transform raw operational data from platforms like Oracle and Databricks into clear performance metrics. As a DP-300 certified analyst pursuing DP-600 and 700 Fabric certifications, I combine technical rigor with a commitment to team growth and operational excellence.

Education

Oregon State University Post-Baccalaureate Computer Science (3.91)
University of Florida M.S. Agronomy (3.8); BS Botany; BA East Asian Languages & Literature

General Motors - Software Engineer (Operations & Reliability) February 2021 – December 2025

- Served as a technical lead and analytical bridge for leadership, translating complex operational data from enterprise platforms into actionable insights for high-level stakeholders.
- Wrote and optimized SQL queries against large relational datasets to support analytics, legacy reports, and end-user data extracts from both Power BI and Microsoft Paginated Reports.
- Built Python APIs and automation improving operational efficiency to refresh reports, and email scheduled report attachments as well as pull Oracle data into a Cognos report.
- Orchestrated and administered reporting workflows using GitHub Actions, DataStage and Azure Databricks, providing monitoring and recovery for automated data delivery.
- Led the design and testing of advanced data models using star schema semantic modeling during a large-scale migration from Oracle to Azure Databricks.
- Led a two-year security-focused learning group covering DevOps security topics, including PortSwigger and TryHackMe labs, and participated and consistently ranked well in company-wide Secure Code Warrior competitions.
- Led DEI training for my organization and was a small group lead promoting and celebrating Asian culture company wide, with monthly activities involving organizing speakers or leading sessions.
- Regularly competed and won company wide challenges including team hackathons and debates.

Cabrillo Coastal General Insurance Agency - Systems Analyst June 2016 – January 2021

- Worked with a VP to build out and improve on our client facing phone tree as well as built dashboards and reports providing leadership insights into call volumes and other metrics.
- On my own time, I built a solution to generate quotes via Postman and automated quote binding/testing using Python and Selenium.
- I was the contact for any questions regarding our company's new comparative rater API.

Pioneer Hi-Bred (Beijing, China) Senior Research Associate June 2013 – June 2015

- I was the main contact between the US corporate office and researchers in China and Australia.
- I customized and deployed automated labeling and tracking solutions that researchers could use to print barcode labels for their petri dishes vs the original manual Excel-based process.
- I provided software training to the different research sites and helped users troubleshoot issues.

Pioneer Hi-Bred - Research Associate January 2008 – May 2013

- I designed and implemented a custom environmental monitoring system using sensors to track humidity, temperature, and light conditions and feed this into a Spotfire dashboard.
